PROFESSIONAL SUMMARY

MSc Data Science graduate (University of Surrey, UK, Merit) with 1+ year of data analysis experience across customer retention, supply chain, and e-commerce domains. Skilled in SQL, Python, and Power BI; building dashboards, surfacing commercial insights, and presenting findings to business stakeholders through clear data storytelling. Strong foundation in statistical analysis and data modeling, with hands-on experience building and deploying interactive analytical tools.

WORK EXPERIENCE

Data Analyst | Kingston Technology, Remote *Aug 2025 – Present*

Python | PowerBI | DAX | SQL | Statistics

- Owned Power BI dashboards tracking regional inventory and shipment fulfillment across **6 distribution centers**; evolved the role from internship-level dashboard support into full independent ownership.
- Wrote and optimised T-SQL queries (CTEs, window functions) to handle **10–15 ad hoc requests/week** from Supply Chain and Sales Ops; cut average turnaround time by **35%**.
- Identified a recurring stockout pattern in one flash storage product line; contributed to a forecasting fix that reduced backorders by **18%**.
- Led data cleaning and reconciliation across **3 ERP/MES source systems**; reduced discrepancy tickets by **25%**.
- Co-presented quarterly sales-by-region findings to stakeholders alongside a Senior Analyst.

Data Analyst Intern | Unified Mentor Pvt Ltd, Remote *Jan 2025 – Jun 2025*

Project: Customer Engagement & Retention Analytics *Mar 2025 – Apr 2025*

Python | Pandas | Plotly | Scikit-learn | Streamlit

- Segmented **10,000 bank customers** into 4 behavioural profiles using activity, balance, and product usage signals; identified inactive customers churning at **1.9x the rate** of active members, isolating the highest-risk segments for retention targeting.
- Quantified that cross-selling a second product cuts churn by **~22pp (27% to 6%)**; flagged **115 high-balance customers** concentrated in the top-risk segment, a cohort disproportionately exposed to 36% churn.
- Engineered a composite engagement score from 4 signals (activity, tenure, balance, product holdings); built a **Streamlit dashboard** enabling stakeholder self-service segment exploration across 10K customers.

Project: Restaurant Profit Optimisation - SkyCity Auckland *May 2025 – Jun 2025*

Python | XGBoost | Scikit-learn | Streamlit

- Built and evaluated 4 models (Linear Regression, Random Forest, Gradient Boosting, XGBoost) to forecast restaurant profit from channel mix and commission structure across **1,696 restaurants**; XGBoost explained **98.8% of profit variance** (MAE $464).
- Built a scenario simulator and grid-search optimisation layer into a live Streamlit dashboard; identified a median **21.7% profit uplift** achievable through channel-mix rebalancing alone.
- Derived a break-even commission benchmark (**32.6%**) showing ~29% of restaurants losing money on aggregator orders at current rates, giving stakeholders a direct negotiation lever.

PROJECTS

E-commerce Sales & Customer Analytics *Nov 2025 – Dec 2025*

Python | PostgreSQL | Power BI | DAX | Pandas | SQL

- Rebuilt **100,000+ unstructured e-commerce transactions** into a normalised PostgreSQL star schema (5 tables) from scratch; implemented CTEs, window functions, and indexed queries for sub-second sales, rolling-average, and cohort queries.
- Engineered 4 net-new business metrics absent from source data (revenue, profit margin, AOV, purchase frequency); built a Power BI/DAX dashboard surfacing **£5.58M annual revenue** and a **£1.08M peak month**, with category-to-product drill-through.

- Identified a **6,000-customer churn spike** in October tied to post-promotion disengagement; applied Market Basket Analysis to surface cross-sell pairs — fashion accessories × children's fashion and garden tools × flowers (**lift up to 22.6**) — for bundling and placement recommendations.

5G Energy Consumption Prediction - MSc Dissertation *Feb 2025 – Jul 2025*

Python | PyTorch | CNN-RNN / LSTM / GRU | Feature Engineering | Optuna

- Built hybrid CNN-RNN models (RNN, LSTM, GRU) forecasting hourly energy use across **1,020 5G base stations** (92,629 records); cut forecast error **44%** (MAE 1.52 → 0.85, MAPE 3.3%) with consistent performance on unseen stations using group-stratified cross-validation.
- Engineered 20+ features (temporal lags, spline encodings, signal smoothing) tuned with Optuna TPE; generalised consistently to unseen base stations.

TECHNICAL SKILLS

SQL: Joins, CTEs, Window Functions, Aggregations, Indexing, Query Optimisation, Code Review, PostgreSQL, MySQL, SQL Server

Python: Pandas, NumPy, Matplotlib, Seaborn, Plotly

Visualization & BI: Power BI, DAX, Data Visualization, Star Schema, Data Modeling, Data Warehousing, Drill-through, KPI Tracking & Reporting, Dashboard Design & Development, Slicers, Excel (Pivot Tables, VLOOKUP, XLOOKUP, Power Query, Pivot Charts)

Analytics: EDA, Data Analysis, Data Cleaning, Data Validation, Data Quality Assessment, Statistical Testing, Hypothesis Testing, Confidence Intervals, A/B Testing, Cohort Analysis, Trend Analysis, Time-Series, Regression, Market Basket Analysis, Business Intelligence (BI) Reporting, Data Storytelling, ETL, Data Pipeline

Predictive Analytics & Modelling: XGBoost, Scikit-learn, Feature Engineering

Tools: Docker, Git, GitHub, Streamlit, AWS

EDUCATION

MSc Data Science | University of Surrey, UK *Sept 2024 - Sept 2025*

Merit | GPA 3.5 / 4.0 | Dissertation: 5G Energy Consumption Prediction

BTech Engineering | University of Kashmir, India *Jan 2019 - Jan 2023*

Upper Second Class (2:1)

TRAINING & CERTIFICATIONS

What is Data Science | IBM 2025

SQL Advanced | HackerRank 2024

Deep Learning Specialisation | iNeuron 2024

Natural Language Processing | iNeuron 2024
